LEVEL 1 — CORE WORKSHOP

17 Sections

EXERCISE

Verification Test

GOAL

Catch the errors AI makes — before they catch you.

The Exercise

You were given a prompt containing statistics with deliberate errors. You pasted it into one or more AI tools and checked whether the AI caught the mistakes.

Key Takeaway

No single AI tool reliably catches every factual error. The verification habit — checking AI output against primary sources before sharing — is the most important skill from this workshop.

YOUR NOTES

AI confidently invented two statistics. Caught with a Google search.

EXERCISE

Tool Safari

GOAL

Explore multiple AI tools hands-on. Know which tool fits which task.

The Exercise

You explored multiple AI tools hands-on, using guided worksheets to compare how each tool handles the same types of tasks.

Each tool has strengths and limitations. Choosing the right tool for the job matters more than mastering one tool for everything.

YOUR NOTES

No notes recorded

REFERENCE

The RICECO Framework

GOAL

Six ingredients for prompts that produce usable output the first time.

The RICECO Framework

LETTER	ELEMENT	QUESTION
R	Role	Who is the AI acting as?
I	Instruction	What exactly do you want it to do?
C	Context	What background information is needed?
E	Examples	What does good look like?
C	Constraints	What rules must it follow?
O	Output Format	How should the final result be formatted?

The 80% Shortcut

You don't need all six every time. For most daily tasks, I + C + C — Instruction, Context, Constraints — gets you 80% of the way there.

YOUR NOTES

No notes recorded

EXERCISE

Draft with RICECO

GOAL

Use your 6 Ways worksheet task to create a real first draft.

The Exercise

You picked a real task from your 6 Ways worksheet and built a complete RICECO prompt to draft it. The fields below show what you entered for each RICECO element.

ROLE

You are a senior policy analyst.

INSTRUCTION

Summarize the attached child welfare report.

CONTEXT

Audience: state legislators with no technical background.

CONSTRAINTS

Under 300 words. No jargon.

OUTPUT FORMAT

Bulleted summary plus 2 paragraph narrative.

YOUR NOTES

First draft was good but needed verification on the data points.

EXERCISE

LLM Peer Review

GOAL

Use a second AI to check the first one's work. Build the verification habit.

The Exercise

You ran the same task through two different AI tools and compared their outputs. Then you used one model to critique the other's work.

The Critique Scaffold

"Here are the instructions I gave to [Model A]. Below is the response. Critique only. Do not redraft."

Why This Matters

AI models have different strengths and blind spots. Using a second model as a reviewer catches errors that a single model misses — especially factual claims, logical gaps, and tone issues.

YOUR NOTES

No notes recorded

EXERCISE

Distill

GOAL

Turn something complex into something clear — policy to plain language, long to short.

The Exercise

You took something complex and turned it into something clear — a long document into a summary, policy language into plain language, or dense data into key takeaways.

RICECO Scaffold for Distillation

I: Summarize the attached document.

C: The audience is busy executives who need the bottom line.

C: Keep it under 300 words. No jargon.

O: 3 bullet points of key takeaways, 1 paragraph summary.

YOUR NOTES

No notes recorded

EXERCISE

Prepare

GOAL

Get ready for a high-stakes conversation before it happens — not after.

The Exercise

You used AI to prepare for a high-stakes conversation — anticipating objections, practicing responses, and planning your approach before the real thing.

RICECO Scaffold for Preparation

R: You are a skeptical [stakeholder type].

I: Roleplay a conversation with me about [topic].

C: We are at [setting]. I am presenting [what].

C: Push back on my points. Ask one question at a time.

O: Dialogue format. Wait for my response before replying.

YOUR NOTES

No notes recorded

EXERCISE

Synthesize

GOAL

Find patterns across multiple documents that would take hours to read manually.

The Exercise

You used AI to find patterns across multiple documents — identifying common themes, contradictions, and gaps that would take hours to spot manually.

RICECO Scaffold for Synthesis

I: Review the attached reports and identify common themes.

C: Focus on recurring challenges and proposed solutions.

C: Cite which document each point comes from.

O: A thematic summary table with source attribution.

YOUR NOTES

No notes recorded

Power Follow-Ups

GOAL

Nine moves to refine, pressure-test, and reshape AI output until it's actually ready to use.

Nine Moves to Refine AI Output

1. **Go Deeper** — "Expand on point 3 with specific examples."
2. **Change Format** — "Rewrite this as a table / email / FAQ / one-pager."
3. **Shift Audience** — "Rewrite for [board members / new staff / the public]."
4. **Challenge It** — "What are the strongest counterarguments to this?"
5. **Simplify** — "A smart 8th grader should understand this. Rewrite."
6. **Add Constraints** — "Now do it in under 200 words / without jargon / in Spanish."
7. **Verify** — "What sources support these claims? Flag anything you're uncertain about."
8. **Compare** — "How does this compare to [alternative approach]?"
9. **Pressure-Test** — "What's missing? What would a skeptic say?"

These work with any AI tool, on any task. Use them after your first prompt to push the output from "okay" to "actually useful."

YOUR NOTES

No notes recorded

REFERENCE

What AI Is / Is Not

GOAL

Pattern matching, not thinking. The same process produces correct answers and hallucinations.

Core Concept

AI is pattern matching, not thinking. The same process that produces correct answers also produces hallucinations. It doesn't know the difference.

What This Means for Your Work

AI can draft, brainstorm, summarize, and restructure. It cannot verify facts, exercise professional judgment, or understand the human stakes of your decisions. Every output needs a human checkpoint before it reaches a client, a colleague, or a decision-maker.

YOUR NOTES

No notes recorded

Persistent Context

GOAL

Stop re-explaining yourself. Move from one-off chats to persistent, reusable workflows.

Core Concept

Stop re-explaining yourself. Move from one-off chats to persistent, reusable workflows.

Persistent Context Tools

TOOL TYPE	DESCRIPTION
Custom Instructions	Basic rules applied to every chat.
Projects / Spaces	Scoped context for specific workflows.
Custom GPTs	Shareable, specialized bots with specific knowledge.
NotebookLM	Retrieval-Augmented Generation. Highest accuracy on specific docs.

YOUR NOTES

No notes recorded

EXERCISE

Red / Yellow / Green

GOAL

Build shared judgment about what's safe, context-dependent, and risky to do with AI at work.

The Exercise

Your team sorted AI use cases into three categories based on risk level and built shared judgment about what's appropriate in your work context.

RED — CLEARLY RISKY

Drafting communications about an active personnel investigation.

YELLOW — CONTEXT-DEPENDENT

Summarizing internal meeting notes that mention specific staff.

GREEN — RELATIVELY SAFE

Reformatting public agendas into plain-language summaries.

THE CONDITION THAT MOVES YELLOW → GREEN FOR ME

Anonymized data + verified by a peer before sending.

YOUR NOTES

No notes recorded

EXERCISE

Capstone — Your 6 Ways in Action

GOAL

Build a complete, AI-assisted work product on a real task. Full cycle: prompt, run, verify, revise.

The Exercise

You picked real tasks from your work and matched each one to one of the 6 Ways to use AI. Then you built a complete AI-assisted work product: prompt, run, verify, revise.

The 6 Ways to Use AI

1. **Draft** — Create something new (email, report, talking points, agenda)
2. **Brainstorm** — Generate options or ideas (approaches, solutions, alternatives)
3. **Prepare** — Get ready for a conversation (anticipate objections, plan questions)
4. **Synthesize** — Find patterns across sources (themes in feedback, documents)
5. **Distill** — Make complex things clear (policy to plain language, long to short)
6. **Critique** — Evaluate and find weaknesses (check a draft, identify gaps)

DRAFT

Used to draft a board memo.

PREPARE

Anticipated tough questions from Commissioner Smith.

DISTILL

Turned a 40-page strategic plan into a one-pager.

YOUR NOTES

The 6 ways are a really useful mental model.

REFERENCE

Overnight Assignment

GOAL

Use what you built on one safe task. Come to Day 2 ready to report.

The Assignment

Use what you learned today on one safe, low-stakes task before tomorrow. Come back ready to report what happened — what worked, what surprised you, and what you'd do differently.

YOUR NOTES

No notes recorded

EXERCISE

Overnight Harvest — Workflow Ideas

GOAL

Surface what you learned last night and find the workflow worth mapping today.

The Exercise

You shared what you learned from your overnight task and surfaced the workflow worth mapping today. The goal: move from "I tried a prompt" to "I found a process worth redesigning."

YOUR NOTES

No notes recorded

EXERCISE

Map Your Workflows

GOAL

Produce a one-page, deployable workflow document — AI insertion points, human verification, and stop conditions.

The Exercise

You mapped a real workflow from your job — documenting how it works today, redesigning it with AI insertion points, and defining the human verification checkpoints and stop conditions that keep it safe.

Weekly Board Memo

WEEKLY

CURRENT PROCESS

- 1. Collect updates from each program area
- 2. Draft narrative in Word
- 3. Circulate for edits
- 4. Format and send

REDESIGNED WITH AI

- 1. Drop raw updates into shared doc
- 2. AI drafts narrative using last memo as template
- 3. Human review for accuracy and tone
- 4. Format and send

VERIFICATION CHECKPOINTS

Human reviews every fact and quote before sending.

STOP CONDITIONS

Stop if AI cannot cite a source for a number, or if it invents a name.

YOUR NOTES

No notes recorded

REFERENCE

Closing

GOAL

Reflect and carry forward.

**"Small things.
Unlikely places.
Extraordinary work."**

You don't have to be first, but you have to be ready.
